IEE Proceedings

Generation, Transmission and Distribution

The Institution of Electrical Engineers, Savoy Place, London WC2R 0BL, United Kingdom
Publishing Department: Michael Faraday House, Six Hills Way, Stevenage, Herts. SG1 2AY, United Kingdom

Volume 143 1996 UK ISSN 1350–2360

HONORARY EDITORS

Prof. E.J. Handschin (*University of Dortmund*) Prof. J.R. McDonald (*University of Strathclyde*)
Prof. J.R. Smith (*University of Strathclyde*) Dr. B. Fox (*The Queen's University of Belfast*)

Pages in issues of *IEE Proc., Gener. Transm. Distrib.* 1996

Pages	Issue No.	Date
1–128	1	January
129–224	2	March
225–304	3	May
305–376	4	July
377–520	5	September
521–616	6	November

Zhang, W. p420
Zhang, X.-P. p61
Zhao, Z. p253
Zhou, R. p135, p377
Zhu, J.Z. p344
Zhu, T.X. p157

ADAPTIVE CONTROL

Adaptive power system stabiliser based on pole-shifting technique p96
Artificial neural-network-based protection scheme for controllable series-compensated EHV transmission lines p535

AUTOMATIC TEST SYSTEMS

Combining design and operational knowledge to enhance generator plant diagnostics p300

CABLES AND OVERHEAD LINES

Artificial neural-network-based protection scheme for controllable series-compensated EHV transmission lines p535
Computer-aided design of a new nonunit protection scheme for EHV teed circuits p142
Decoupled simulation of asymmetrical three-phase power network transients p587
Effects of magnetic field induction and ground potential rise on pilot wire relay system operations p290
Fault location on two-terminal transmission lines based on voltages p1
Line monitoring and fault location using spread spectrum on power line carrier p427
Modelling of a transmission tower for lightning-surge analysis p283
Nonunit protection technique for EHV transmission systems based on fault-generated noise. Part 3: Engineering and HV laboratory testing p276
Numerical and experimental evaluation of magnetic field generated by power busbar systems p455
On-line leakage current monitoring of 400 kV insulator strings in polluted areas p560

CALIBRATION

Computational method for remote meter calibration in power systems p393

CIRCUIT BREAKERS

Interaction of helical arc devices with interconnected networks p89

CLOSED LOOP SYSTEMS

Robust nonlinear controller for power system transient stability enhancement with voltage regulation p407

COMPUTER APPLICATIONS

Artificial neural-network-based protection scheme for controllable series-compensated EHV transmission lines p535
Artificial neural network power system stabiliser trained with an improved BP algorithm p135
Formula for the effect of a static VAr compensator on synchronising torque coefficient p582
Nonlinear optimal-variable-aim strategy for improving multimachine power system transient stability p249
Rule-based approach to load transfer to alternate supplies based on the phase of the residual voltage on the disconnected busbar p467
Self-tuning control applied to turbogenerator AVRs p492

CONTROL SYSTEMS ANALYSIS

Adaptive power system stabiliser based on pole-shifting technique p96
Application of fuzzy logic stabilisers in a multimachine power system environment p263
Application of the controllable series compensator in damping power system oscillations p359
Artificial neural-network-based protection scheme for controllable series-compensated EHV transmission lines p535
Comparison of modal controllability between FACTS-based stabilisers and PSS in increasing the oscillation stability of multimachine power systems p575
Design of nonlinear robust excitation control for multimachine power systems p253
Formula for the effect of a static VAr compensator on synchronising torque coefficient p582
Genetic algorithm aided controller design with application to SVC p258
Intelligent control of large power transformer cooling pumps p474
Nonlinear optimal-variable-aim strategy for improving multimachine power system transient stability p249
Rule-based approach to load transfer to alternate supplies based on the phase of the residual voltage on the disconnected busbar p467
Synchronous generator damping enhancement through coordinated control of exciter and SVC p211

CONTROL SYSTEM SYNTHESIS

Application of the controllable series compensator in damping power system oscillations p359
Design of nonlinear robust excitation control for multimachine power systems p253
Genetic algorithm aided controller design with application to SVC p258
Intelligent control of large power transformer cooling pumps p474
Nonlinear optimal-variable-aim strategy for improving multimachine power system transient stability p249

CONVERTORS

Harmonic generation by HVDC schemes involving converters and static VAr compensators p66
HVDC converter transformer core saturation instability: a frequency domain analysis p75
Newton solution for the steady-state interaction of AC/DC systems p200
Novel grid-connected photovoltaic inverter p219
Suppression of transmission system oscillations by thyristor-controlled series compensation p7

DISCRETE SYSTEMS

Genetic algorithm aided controller design with application to SVC p258

ELECTROMAGNETISM

Numerical and experimental evaluation of magnetic field generated by power busbar systems p455

ELECTRIC VARIABLES CONTROL

Application of the controllable series compensator in damping power system oscillations p359
Artificial neural-network-based protection scheme for controllable series-compensated EHV transmission lines p535
Capability of the static VAr compensator in damping power system oscillations p353
Formula for the effect of a static VAr compensator on synchronising torque coefficient p582
Genetic algorithm aided controller design with application to SVC p258
Harmonic generation by HVDC schemes involving converters and static VAr compensators p66
Newton-Raphson algorithm for the reliable solution of large power networks with embedded FACTS devices p447
Robust nonlinear controller for power system transient stability enhancement with voltage regulation p407
Self-tuning control applied to turbogenerator AVRs p492
Synchronous generator damping enhancement through coordinated control of exciter and SVC p211

EXPERT SYSTEMS

Combining design and operational knowledge to enhance generator plant diagnostics p300
Fuzzy neural network and fuzzy expert system for load forecasting p106
Fuzzy reasoning for knowledge-based assessment of dynamic voltage security p157
Interactive expert system for optimal design of electricity distribution systems p151
Rule-based approach to load transfer to alternate supplies based on the phase of the residual voltage on the disconnected busbar p467

FEEDBACK

Design of nonlinear robust excitation control for multimachine power systems p253
Synchronous generator damping enhancement through coordinated control of exciter and SVC p211

FUZZY CONTROL

Application of fuzzy logic stabilisers in a multimachine power system environment p263
Intelligent control of large power transformer cooling pumps p474

GENERATORS

Self-tuning control applied to turbogenerator AVRs p492
Stochastic evaluation of turbine-generator shaft torsional torques during faulty synchronisation p487

INDUCTION MOTORS

Simple model for post-fault motor behaviour for reliability/power quality assessment of industrial power systems p56
Use of naturally occurring system disturbances to estimate the fault current contribution of induction motors p243

INSTRUMENTATION AND MEASUREMENT

Optimal harmonic sensor placement in fundamental network topologies p608

MAGNETIC MATERIALS AND DEVICES

HVDC converter transformer core saturation instability: a frequency domain analysis p75

MATHEMATICAL TECHNIQUES

Application of Gabor transform technique to supervise power system transient harmonics p461
Combined active and reactive dispatch with multiple objectives using an analytic hierarchical process p344
Constrained multiobjective global optimisation of longitudinal interconnected power system by genetic algorithm p435
Distribution fast decoupled state estimation by measurement pairing p43
Economic dispatch of generators with prohibited operating zones: a genetic algorithm approach p529
Efficient algorithm to optimise the energy generation by pumped storage units in probabilistic production costing p546
Efficient load flow method for distribution systems with radial or mesh configuration p33
Evolutionary programming approach to reactive power planning p365
Fuzzy reasoning for knowledge-based assessment of dynamic voltage security p157
Genetic algorithm aided controller design with application to SVC p258
Harmonic generation by HVDC schemes involving converters and static VAr compensators p66
Heuristics-guided evolutionary approach to multiobjective generation scheduling p553
HVDC converter transformer core saturation instability: a frequency domain analysis p75

Hybrid method of determining the transient stability margin of a power system p27
Line monitoring and fault location using spread spectrum on power line carrier p427
Loss-constrained economic power dispatch p387
New method of power swing blocking for digital distance protection p19
Newton solution for the steady-state interaction of AC/DC systems p200
Nonlinear autoregressive integrated neural network model for short-term load forecasting p500
Novel method of finding the first swing stability margin of a power system from time domain simulation p413
Numerical and experimental evaluation of magnetic field generated by power busbar systems p455
Optimal harmonic sensor placement in fundamental network topologies p608
Phase-decoupled load flow method for radial and weakly-meshed distribution networks p39
Scheduling short-term hydrothermal generation using evolutionary programming techniques p371
Short-term hydro-scheduling using Hopfield neural network p269
Solving the security constrained optimal power flow problem in a distributed computing environment p593
Three-phase fast decoupled power flow for distribution networks p188
Weak bus oriented reactive power planning for system security p541

MEASUREMENT OF SPECIFIC VARIABLES

Numerical and experimental evaluation of magnetic field generated by power busbar systems p455
On-line leakage current monitoring of 400 kV insulator strings in polluted areas p560

MEASUREMENT SCIENCE

Computational method for remote meter calibration in power systems p393

MULTIPROCESSOR SYSTEMS

Decoupled asymmetrical three-phase load flow study by parallel processing p61
Decoupled simulation of asymmetrical three-phase power network transients p587
Solving the security constrained optimal power flow problem in a distributed computing environment p593

MULTIVARIABLE CONTROL SYSTEMS

Robust decentralised load-frequency control of multi-area power systems p377

NEURAL NETS

Artificial neural-network-based protection scheme for controllable series-compensated EHV transmission lines p535
Artificial neural network power system stabiliser trained with an improved BP algorithm p135
Fuzzy neural network and fuzzy expert system for load forecasting p106
Harmonic estimation in a power system using adaptive perceptrons p565
Intelligent control of large power transformer cooling pumps p474
Nonlinear autoregressive integrated neural network model for short-term load forecasting p500
Short-term hydro-scheduling using Hopfield neural network p269
Topology processing and static state estimation using artificial neural networks p99
Transient stability screening using artificial neural networks within a dynamic security assessment system p129

NONELECTRIC VARIABLES CONTROL

Intelligent control of large power transformer cooling pumps p474

NONLINEAR CONTROL SYSTEMS

Design of nonlinear robust excitation control for multimachine power systems p253
Nonlinear optimal-variable-aim strategy for improving multimachine power system transient stability p249
Robust nonlinear controller for power system transient stability enhancement with voltage regulation p407

NONLINEAR NETWORK ANALYSIS

Bifurcation route to chaos for a ferroresonant circuit using an electromagnetic transients program p238

NUMERICAL ANALYSIS

Application of Gabor transform technique to supervise power system transient harmonics p461
Computational method for remote meter calibration in power systems p393
Decoupled asymmetrical three-phase load flow study by parallel processing p61
Distribution fast decoupled state estimation by measurement pairing p43
Iterative techniques for the solution of complex DC-rail-traction systems including regenerative braking p613
Loss-constrained economic power dispatch p387
Newton-Raphson algorithm for the reliable solution of large power networks with embedded FACTS devices p447
Newton solution for the steady-state interaction of AC/DC systems p200
Numerical and experimental evaluation of magnetic field generated by power busbar systems p455
Phase-decoupled load flow method for radial and weakly-meshed distribution networks p39
Robust decentralised load-frequency control of multi-area power systems p377

OPTIMAL CONTROL

Design of nonlinear robust excitation control for multimachine power systems p253
Genetic algorithm aided controller design with application to SVC p258
Nonlinear optimal-variable-aim strategy for improving multimachine power system transient stability p249
Self-tuning control applied to turbogenerator AVRs p492

OPTIMISATION

Efficient algorithm to optimise the energy generation by pumped storage units in probabilistic production costing p546
Loss-constrained economic power dispatch p387
Optimal harmonic sensor placement in fundamental network topologies p608
Scheduling short-term hydrothermal generation using evolutionary programming techniques p371
Short-term hydro-scheduling using Hopfield neural network p269
Solving the security constrained optimal power flow problem in a distributed computing environment p593

PARALLEL PROCESSING

Decoupled asymmetrical three-phase load flow study by parallel processing p61

PARAMETER ESTIMATION

Use of naturally occurring system disturbances to estimate the fault current contribution of induction motors p243

POWER ELECTRONICS

Novel grid-connected photovoltaic inverter p219

POWER ENGINEERING COMPUTING

Artificial neural-network-based protection scheme for controllable series-compensated EHV transmission lines p535
Artificial neural network power system stabiliser trained with an improved BP algorithm p135
Bifurcation route to chaos for a ferroresonant circuit using an electromagnetic transients program p238
Combining design and operational knowledge to enhance generator plant diagnostics p300
Computer-aided design of a new nonunit protection scheme for EHV teed circuits p142
Decoupled asymmetrical three-phase load flow study by parallel processing p61
Decoupled simulation of asymmetrical three-phase power network transients p587
Formula for the effect of a static VAr compensator on synchronising torque coefficient p582
Fuzzy neural network and fuzzy expert system for load forecasting p106
Fuzzy reasoning for knowledge-based assessment of dynamic voltage security p157
Harmonic estimation in a power system using adaptive perceptrons p565
Interactive expert system for optimal design of electricity distribution systems p151
Nonlinear autoregressive integrated neural network model for short-term load forecasting p500
Nonlinear optimal-variable-aim strategy for improving multimachine power system transient stability p249
Rule-based approach to load transfer to alternate supplies based on the phase of the residual voltage on the disconnected busbar p467
Self-tuning control applied to turbogenerator AVRs p492
Short-term hydro-scheduling using Hopfield neural network p269
Solving the security constrained optimal power flow problem in a distributed computing environment p593
Topology processing and static state estimation using artificial neural networks p99
Transient stability screening using artificial neural networks within a dynamic security assessment system p129
Use of naturally occurring system disturbances to estimate the fault current contribution of induction motors p243

POWER SYSTEM CONTROL

Adaptive power system stabiliser based on pole-shifting technique p96
Application of fuzzy logic stabilisers in a multimachine power system environment p263
Application of the controllable series compensator in damping power systems oscillations p359
Artificial neural-network-based protection scheme for controllable series-compensated EHV transmission lines p535
Artificial neural network power system stabiliser trained with an improved BP algorithm p135
Capability of the static VAr compensator in damping power system oscillations p353
Comparison of modal controllability between FACTS-based stabilisers and PSS in increasing the oscillation stability of multimachine power systems p575
Design of nonlinear robust excitation control for multimachine power systems p253
Formula for the effect of a static VAr compensator on synchronising torque coefficient p582
Fuzzy reasoning for knowledge-based assessment of dynamic voltage security p157
Genetic algorithm aided controller design with application to SVC p258
Harmonic generation by HVDC schemes involving converters and static VAr compensators p66
Intelligent control of large power transformer cooling pumps p474
Newton-Raphson algorithm for the reliable solution of large power networks with embedded FACTS devices p447
Nonlinear optimal-variable-aim strategy for improving multimachine power system transient stability p249
Robust decentralised load-frequency control of multi-area power systems p377
Robust nonlinear controller for power system transient stability enhancement with voltage regulation p407
Rule-based approach to load transfer to alternate supplies based on the phase of the residual voltage on the disconnected busbar p467
Self-tuning control applied to turbogenerator AVRs p492
Synchronous generator damping enhancement through coordinated control of exciter and SVC p211

POWER SYSTEM MANAGEMENT

Adaptive power system stabiliser based on pole-shifting technique p96
Application of fuzzy logic stabilisers in a multimachine power system environment p263
Application of the controllable series compensator in damping power system oscillations p359
Applications of customer outage costs in system planning, design and operation p305
Artificial neural-network-based protection scheme for controllable series-compensated EHV transmission lines p535
Artificial neural network power system stabiliser trained with an improved BP algorithm p135
Assessment of customer outage costs due to electric service interruptions: residential sector p163
Capability of the static VAr compensator in damping power system oscillations p353
Combined active and reactive dispatch with multiple objectives using an analytic hierarchical process p344
Comparison of modal controllability between FACTS-based stabilisers and PSS in increasing the oscillation stability of multimachine power systems p575
Constrained multiobjective global optimisation of longitudinal interconnected power system by genetic algorithm p435
Design of nonlinear robust excitation control for multimachine power systems p253
Economic dispatch of generators with prohibited operating zones: a genetic algorithm approach p529
Efficient algorithm to optimise the energy generation by pumped storage units in probabilistic production costing p546
Enhanced adequacy equivalent for composite power system reliability evaluation p420
Evaluation of reliability worth and value of lost load p171
Factors affecting customer outage costs due to electric service interruptions p521
Formula for the effect of a static VAr compensator on synchronising torque coefficient p582
Framework for the incorporation of demand-side in a competitive electricity market p232
Fuzzy reasoning for knowledge-based assessment of dynamic voltage security p157
Genetic algorithm aided controller design with application to SVC p258
Harmonic generation by HVDC schemes involving converters and static VAr compensators p66
Impacts of demand-side management on reliability cost/reliability worth analysis p225
Loss-constrained economic power dispatch p387
Newton-Raphson algorithm for the reliable solution of large power networks with embedded FACTS devices p447
Newton solution for the steady-state interaction of AC/DC systems p200
Nonlinear optimal-variable-aim strategy for improving multimachine power system transient stability p249
Novel grid-connected photovoltaic inverter p219
Response health constraints in economic load dispatch considering standby units, interruptible loads and postponable outages p599
Robust decentralised load-frequency control of multi-area power systems p377
Robust nonlinear controller for power system transient stability enhancement with voltage regulation p407
Rule-based approach to load transfer to alternate supplies based on the phase of the residual voltage on the disconnected busbar p467
Spinning reserve allocation using response health analysis p337
Synchronous generator damping enhancement through coordinated control of exciter and SVC p211
Three-phase optimal harmonic power flow p321
Tracing the flow of electricity p313
Weak bus oriented reactive power planning for system security p541

POWER SYSTEM PROTECTION

Artificial neural-network-based protection scheme for controllable series-compensated EHV transmission lines p535
Computer-aided design of a new nonunit protection scheme for EHV teed circuits p142
Effects of magnetic field induction and ground potential rise on pilot wire relay system operations p290
Models of grounded mid-tap open-wye and open-delta connected transformers for rigorous analysis of a distribution system p82
New method of power swing blocking for digital distance protection p19
Nonunit protection technique for EHV transmission systems based on fault-generated noise. Part 3: Engineering and HV laboratory testing p276
On the equivalence of uniform and two-layer soils to multilayer soils in the analysis of grounding systems p49
Phase selection based on superimposed components p295
Simple model for post-fault motor behaviour for reliability/power quality assessment of industrial power systems p56
Weak bus oriented reactive power planning for system security p541

POWER SYSTEMS AND APPLICATIONS

Application of Gabor transform technique to supervise power system transient harmonics p461
Interaction of helical arc devices with interconnected networks p89
Iterative techniques for the solution of complex DC-rail-traction systems including regenerative braking p613
Models of grounded mid-tap open-wye and open-delta connected transformers for rigorous analysis of a distribution system p82

POWER SYSTEMS AND PLANTS

Adequacy and reliability cost/worth implications of nonutility generation p115
Application of Gabor transform technique to supervise power system transient harmonics p461
Application of the decomposition technique for forecasting the load of a large electric power network p13
Applications of customer outage costs in system planning, design and operation p305
Bifurcation route to chaos for a ferroresonant circuit using an electromagnetic transients program p238
Capability of the static VAr compensator in damping power system oscillations p353
Combining design and operational knowledge to enhance generator plant diagnostics p300
Computational method for remote meter calibration in power systems p393
Computer-aided design of a new nonunit protection scheme for EHV teed circuits p142
Continuous harmonic state estimation of power systems p329
Decoupled asymmetrical three-phase load flow study by parallel processing p61
Decoupled simulation of asymmetrical three-phase power network transients p587
Economic dispatch of generators with prohibited operating zones: a genetic algorithm approach p529
Effect of rotational load shedding on overall power system adequacy indices p181
Effects of magnetic field induction and ground potential rise on pilot wire relay system operations p290
Efficient algorithm to optimise the energy generation by pumped storage units in probabilistic production costing p546
Evolutionary programming approach to reactive power planning p365
Fault location on two-terminal transmission lines based on voltages p1
Fuzzy neural network and fuzzy expert system for load forecasting p106
Generation availability assessment of wind farms p507
Harmonic estimation in a power system using adaptive perceptrons p565
Harmonic generation by HVDC schemes involving converters and static VAr compensators p66
Heuristics-guided evolutionary approach to multiobjective generation scheduling p553
Hybrid method of determining the transient stability margin of a power system p27
Impacts of demand-side management on reliability cost/reliability worth analysis p225
Interaction of helical arc devices with interconnected networks p89
Interactive expert system for optimal design of electricity distribution systems p151
Iterative techniques for the solution of complex DC-rail-traction systems including regenerative braking p613
Line monitoring and fault location using spread spectrum on power line carrier p427
Models of grounded mid-tap open-wye and open-delta connected transformers for rigorous analysis of a distribution system p82
Modified two-level state estimation approach [for power systems] p193
Network observability: theory and algorithms based on triangular factorisation and path graph concepts p123
New method of power swing blocking for digital distance protection p19
New scaling concept in power system analysis p399
Nonlinear autoregressive integrated neural network model for short-term load forecasting p500
Nonunit protection technique for EHV transmission systems based on fault-generated noise. Part 3: Engineering and HV laboratory testing p276
Novel grid-connected photovoltaic inverter p219
Novel method of finding the first swing stability margin of a power system from time domain simulation p413
Optimal harmonic sensor placement in fundamental network topologies p608
Response health constraints in economic load dispatch considering standby units, interruptible loads and postponable outages p599
Rule-based approach to load transfer to alternate supplies based on the phase of the residual voltage on the disconnected busbar p467
Scheduling short-term hydrothermal generation using evolutionary programming techniques p371
Short-term hydro-scheduling using Hopfield neural network p269
Simple model for post-fault motor behaviour for reliability/power quality assessment of industrial power systems p56
Solving the security constrained optimal power flow problem in a distributed computing environment p593
Spinning reserve allocation using response health analysis p337
Suppression of transmission system oscillations by thyristor-controlled series compensation p7
Three-phase fast decoupled power flow for distribution networks p188
Topology processing and static state estimation using artificial neural networks p99
Tracing the flow of electricity p313
Transient stability screening using artificial neural networks within a dynamic security assessment system p129
Use of naturally occurring system disturbances to estimate the fault current contribution of induction motors p243
Weak bus oriented reactive power planning for system security p541

POWER TRANSMISSION AND DISTRIBUTION

Applications of customer outage costs in system planning, design and operation p305
Artificial neural-network-based protection scheme for controllable series-compensated EHV transmission lines p535
Comparison of modal controllability between FACTS-based stabilisers and PSS in increasing the oscillation stability of multimachine power systems p575
Distribution fast decoupled state estimation by measurement pairing p43
Effects of magnetic field induction and ground potential rise on pilot wire relay system operations p290
Efficient load flow method for distribution systems with radial or mesh configuration p33
Evaluation of reliability worth and value of lost load p171
Harmonic generation by HVDC schemes involving converters and static VAr compensators p66
HVDC converter transformer core saturation instability: a frequency domain analysis p75
Interaction of helical arc devices with interconnected networks p89
Interactive expert system for optimal design of electricity distribution systems p151
Loss-constrained economic power dispatch p387
Models of grounded mid-tap open-wye and open-delta connected transformers for rigorous analysis of a distribution system p82
New scaling concept in power system analysis p399
Newton-Raphson algorithm for the reliable solution of large power networks with embedded FACTS devices p447
Nonunit protection technique for EHV transmission systems based on fault-generated noise. Part 3: Engineering and HV laboratory testing p276
Optimal harmonic sensor placement in fundamental network topologies p608
Phase-decoupled load flow method for radial and weakly-meshed distribution networks p39
Simple model for post-fault motor behaviour for reliability/power quality assessment of industrial power systems p56
Suppression of transmission system oscillations by thyristor-controlled series compensation p7
Three-phase fast decoupled power flow for distribution networks p188
Tracing the flow of electricity p313

PREDICTIVE CONTROL

Self-tuning control applied to turbogenerator AVRs p492

PROBABILITY AND STATISTICS

Efficient algorithm to optimise the energy generation by pumped storage units in probabilistic production costing p546
Generation availability assessment of wind farms p507
Nonlinear autoregressive integrated neural network model for short-term load forecasting p500
Response health constraints in economic load dispatch considering standby units, interruptible loads and postponable outages p599
Simple model for post-fault motor behaviour for reliability/power quality assessment of industrial power systems p56
Spinning reserve allocation using response health analysis p337
Stochastic evaluation of turbine-generator shaft torsional torques during faulty synchronisation p487

PRODUCTION ENGINEERING

Adequacy and reliability cost/worth implications of nonutility generation p115
Applications of customer outage costs in system planning, design and operation p305
Assessment of customer outage costs due to electric service interruptions: residential sector p163
Effect of rotational load shedding on overall power system adequacy indices p181
Enhanced adequacy equivalent for composite power system reliability evaluation p420
Evaluation of reliability worth and value of lost load p171
Factors affecting customer outage costs due to electric service interruptions p521
Generation availability assessment of wind farms p507
Impacts of demand-side management on reliability cost/reliability worth analysis p225
Simple model for post-fault motor behaviour for reliability/power quality assessment of industrial power systems p56
Spinning reserve allocation using response health analysis p337

SELF-ADJUSTING SYSTEMS

Adaptive power system stabiliser based on pole-shifting technique p96
Artificial neural-network-based protection scheme for controllable series-compensated EHV transmission lines p535
Self-tuning control applied to turbogenerator AVRs p492

SIGNAL DETECTION

Computer-aided design of a new nonunit protection scheme for EHV teed circuits p142

SIGNAL PROCESSING

Computer-aided design of a new nonunit protection scheme for EHV teed circuits p142
Line monitoring and fault location using spread spectrum on power line carrier p427
New method of power swing blocking for digital distance protection p19

SIMULATION, MODELLING AND IDENTIFICATION

Topology processing and static state estimation using artificial neural networks p99

STABILITY

Adaptive power system stabiliser based on pole-shifting technique p96
Application of fuzzy logic stabilisers in a multimachine power system environment p263
Application of the controllable series compensator in damping power system oscillations p359
Artificial neural network power system stabiliser trained with an improved BP algorithm p135
Comparison of modal controllability between FACTS-based stabilisers and PSS in increasing the oscillation stability of multimachine power systems p575
Design of nonlinear robust excitation control for multimachine power systems p253
Formula for the effect of a static VAr compensator on synchronising torque coefficient p582
HVDC converter transformer core saturation instability: a frequency domain analysis p75
Robust decentralised load-frequency control of multi-area power systems p377
Robust nonlinear controller for power system transient stability enhancement with voltage regulation p407
Synchronous generator damping enhancement through coordinated control of exciter and SVC p211

SWITCHGEAR

Interaction of helical arc devices with interconnected networks p89

SYNCHRONOUS MACHINES

Formula for the effect of a static VAr compensator on synchronising torque coefficient p582
Synchronous generator damping enhancement through coordinated control of exciter and SVC p211
Torsional fatigue of turbine-generator shafts owing to network faults p479

TELEMETRY

Computational method for remote meter calibration in power systems p393

TRANSFORMERS

Application of Gabor transform technique to supervise power system transient harmonics p461
Computer-aided design of a new nonunit protection scheme for EHV teed circuits p142
HVDC converter transformer core saturation instability: a frequency domain analysis p75
Intelligent control of large power transformer cooling pumps p474
Models of grounded mid-tap open-wye and open-delta connected transformers for rigorous analysis of a distribution system p82
New scaling concept in power system analysis p399
Suppression of transmission system oscillations by thyristor-controlled series compensation p7
